Types of Accounting Information Systems

The purpose of an accounting information system (AIS) is to collect, store, and process financial and accounting data and produce informational reports that managers or other interested parties can use to make business decisions. Although an AIS can be a manual system, today most accounting information systems are computer-based. Functions of ...

Accounting Information Systems - Functions and Parts of ...

An accounting as an information system (AIS) is a system of collecting, storing and processing financial and accounting data that are used by decision makers. An accounting information system is generally a computer-based method for tracking accounting activity in conjunction with information technology resources.

Accounting information system - Wikipedia

Accounting information systems are a set of interrelated components, that interact, to achieve a goal. Most accounting information systems are composed of smaller subsystems and vice-versa, every organization has goals. Accounting Information Systems can use advanced technology, be a simple paper-and-pencil system or be something in between.

Accounting Information Systems | AIS Guidance and Information

Accounting Information Systems (AIS) is a discipline that informs theory and practice in accounting and auditing, in a way that draws upon information systems, broadly defined. In so doing, AIS employs theory and practice from the cognate disciplines of MIS and computer science as well as from accounting, auditing, other business disciplines including management and marketing, and the ...
