C Algebras Volume 1 Banach

C $*$ -algebras (pronounced "C-star") are subjects of research in functional analysis, a branch of mathematics. A C $*$ -algebra is a complex algebra A of continuous linear operators on a complex Hilbert space with two additional properties: A is a topologically closed set in the norm topology of operators.; A is closed under the operation of taking adjoints of operators.

In mathematics, a von Neumann algebra or W^* -algebra is a $*$ -algebra of bounded operators on a Hilbert space that is closed in the weak operator topology and contains the identity operator. It is a special type of C $*$ -algebra.. Von Neumann algebras were originally introduced by John von Neumann, motivated by his study of single operators, group representations, ergodic theory and quantum mechanics.

At some point a longer list will become a List of Great Mathematicians rather than a List of Greatest Mathematicians. I've expanded my original List of Thirty to an even Hundred, but you may prefer to reduce it to a Top Seventy, Top Sixty, Top Fifty, Top Forty or Top Thirty list, or even Top Twenty, Top Fifteen or Top Ten List.

Los cuaterniones fueron creados por William Rowan Hamilton en 1843. Hamilton buscaba formas de extender los números complejos (que pueden interpretarse como puntos en un plano) a un número mayor de dimensiones. No pudo hacerlo para 3 dimensiones, pero para 4 dimensiones obtuvo los cuaterniones. Según una historia relatada por el propio Hamilton, la solución al problema que le ocupaba le ...

Open questions Mathematics is something of an extreme case. In most other sciences, new theories and ideas tend to replace older ones. Hence in most sciences work that was done long ago (exactly how long depending on the particular science) is usually superceded by work done as recently as a few decades ago, or less.
