### **Mathematical Models Of Hysteresis And**

Hysteresis is the dependence of the state of a system on its history. For example, a magnet may have more than one possible magnetic moment in a given magnetic field, depending on how the field changed in the past. Plots of a single component of the moment often form a loop or hysteresis curve, where there are different values of one variable depending on the direction of change of another ...

ABSTRACT. Moisture sorption isotherms describe the relationship between moisture content and water activity in food. This work presents basic concepts related to the sorption thermodynamics of water, the classification of isotherms, "uses and limitations of the models", and measurement of sorption isotherms for food materials.

NO GROUP DELAY DISTORTION: No phase errors are acceptable in the last octave between 32Hz and 16 Hz. The goal of no low frequency phase errors and bandwidth below 16 Hz is not achievable with a vented box (phase deviation below cutoff frequency of the port) or a sealed box (impossible to generate low extension at full power without excessive rear cavity size).

Theory. Alternative stable state theory was first proposed by Richard Lewontin (1969), but other early key authors include Holling (1973), Sutherland (1974), May (1977), and Scheffer et al. (2001). In the broadest sense, alternative stable state theory proposes that a change in ecosystem conditions can result in an abrupt shift in the state of the ecosystem, such as a change in population ...

La histéresis es la tendencia de un material a conservar una de sus propiedades, en ausencia del estímulo que la ha generado. Podemos encontrar diferentes manifestaciones de este fenómeno. Por extensión se aplica a fenómenos que no dependen sólo de las circunstancias actuales, sino también de cómo se ha llegado a esas circunstancias.
