Molecular Physical Chemistry A Concise

In chemistry, Molecular orbital (MO) theory is a method for describing the electronic structure of molecules using quantum mechanics. Electrons are not assigned to individual bonds between atoms, but are treated as moving under the influence of the nuclei in the whole molecule. The spatial and energetic properties of electrons are described by quantum mechanics as molecular orbitals surround ...

A chemical formula is a way of presenting information about the chemical proportions of atoms that constitute a particular chemical compound or molecule, using chemical element symbols, numbers, and sometimes also other symbols, such as parentheses, dashes, brackets, commas and plus (+) and minus (−) signs. These are limited to a single typographic line of symbols, which may include ...

All reviewers must submit their reviews via ACS Paragon Plus, which provides complete access to all publishable parts of the manuscript and will save a copy of your comments in case a second round of reviews is needed. All expertise information and surveys are also collected inside ACS Paragon Plus. Some journals provide additional guidance for reviewers.

Index Copernicus Value: 83.95 Organic Chemistry is the study of organic compounds. The carbon atoms combine with other elements in a number of ways to through special bonds like covalent bonds to form a large number of compounds which have a strong influence on the nature, and specific behaviour and properties can be applied to medical, health, industrial and commercial fields.

Tin is a relatively low melting (232°C) material that exists in two allotropic forms at room temperature and pressure, α -Sn (gray tin) and β -Sn (white tin). α -Sn is the stable form below 13°C and has the diamond structure (Figure 3a). White, or β -Sn is metallic and has a distorted close-packed lattice.

Edge articles. Chemical Science publishes all original research in one format: Edge articles. Chemical Science editors understand that traditional two- or three-page limits for the dissemination of new research are not suitable across all sub-fields of chemistry. Edge articles have absolutely no page limits, although we anticipate that most will fall between four and 10 pages.
