### **What Is Domain Name System**

The Domain Name System (DNS) is a hierarchical and decentralized naming system for computers, services, or other resources connected to the Internet or a private network. It associates various information with domain names assigned to each of the participating entities. Most prominently, it translates more readily memorized domain names to the numerical IP addresses needed for locating and ...

### **Domain Name System - Wikipedia**

A domain name is a label that identifies a network domain: a distinct group of computers under a central administration or authority.. Within the Internet, domain names are formed by the rules and procedures of the Domain Name System (DNS). Any name registered in the DNS is a domain name. Domain names are used in various networking contexts and for application-specific naming and addressing ...

### **Domain name - Wikipedia**

(1) Short for Domain Name System (or Service or Server), an Internet service that translates domain names into IP addresses. Because domain names are alphabetic, they're easier to remember. The Internet however, is really based on IP addresses. Every time you use a domain name, therefore, a DNS service must translate the name into the corresponding IP address.

### **What is Domain Name System (DNS)? Webopedia Definition**

The Domain Name System (DNS) is a system used to convert a computer's host name into an IP address on the Internet. For example, if a computer needs to communicate with the web server example.net, your computer needs the IP address of the web server example.net. It is the job of the DNS to convert the host name to the IP address of the web server.

### **Domain Name System - Simple English Wikipedia, the free ...**

In informatica e telecomunicazioni il sistema dei nomi di dominio (in inglese: Domain Name System, DNS), è un sistema utilizzato per la risoluzione di nomi dei nodi della rete (in inglese: host) in indirizzi IP. Il servizio è realizzato tramite un database distribuito, costituito dai server DNS. Il DNS ha una struttura gerarchica ad albero rovesciato ed è diviso in domini (com, org, it, ecc.).

### **Domain Name System - Wikipedia**

Le Domain Name System, généralement abrégé DNS, qu'on peut traduire en « système de noms de domaine », est le service informatique distribué utilisé pour traduire les noms de domaine Internet en adresse IP ou autres enregistrements. En fournissant dès les premières années d'Internet, autour de 1985, un service distribué de résolution de noms, le DNS a été un composant essentiel ...

### **Domain Name System — Wikipédia**

Domain name system (DNS) is a hierarchical naming system built on a distributed database. This system transforms domain names to IP addresses and makes it possible to assign domain names to groups of Internet resources and users, regardless of the entities' physical location.

### **What is the Domain Name System (DNS)? - Definition from ...**

Het Domain Name System (DNS) is het systeem en netwerkprotocol dat op het Internet gebruikt wordt om namen van computers naar numerieke adressen (IP-adressen) te vertalen en omgekeerd. Hoewel dit "vertalen" genoemd wordt gaat het gewoon om opzoeken in tabellen, waarin namen aan nummers gekoppeld zijn. DNS is een client-serversysteem: een opvrager (client) gebruikt het DNS-protocol om aan een ...

### **Domain Name System - Wikipedia**

Domain Name System (DNS, pol. system nazw domen) - hierarchiczny rozproszony system nazw sieciowych, który odpowiada na zapytania o nazwy domen.. Dzięki DNS nazwa mnemoniczna, np. pl.wikipedia.org jest tłumaczona na odpowiadający jej adres IP, czyli 91.198.174.192.. DNS to złożony system komputerowy oraz prawny. Zapewnia z jednej strony rejestrację nazw domen

### Domain Name System - Wikipedia

DNS is a very popular and well known protocol. It is used for resolving host names and domain names to IP addresses. The fact is that when you type www.firewall.cx the name is translated into an IP address via a number of queries that take place from your PC towards the DNS server. This DNS Query process (and more) is analysed in great depth in the articles that follow.

### Domain Name System (DNS) - Firewall.cx

The Internet and many larger private Internet Protocol (IP) networks rely on the Domain Name System (DNS) to help direct traffic. The DNS maintains a distributed database of network names and addresses, and it provides methods for computers to remotely query the database. Some people call DNS the "phone book of the Internet."

### Introduction to the Domain Name System (DNS) - Lifewire

Enkelt forklart. DNS (Domain Name System) er internettjenesten som kobler domenenavn sammen med IP-adressen til en tjener på Internett og dermed gjør det mulig å sende informasjon til riktig sted på nettet. Med andre ord vil DNS oversette domenenavnet f. eks. vg.no til IP-adressen til serveren som inneholder VG sine nettsider.
